

Keep your chin up with Ultherapy®

It's time to let saggy loose skin become of a thing of the past!

Ultherapy has become one of the most popular treatments for skin tightening on the beauty scene to date. While the results are more subtle than those of a face-lift, the procedure is gaining an increased following among those who have neither the time nor the desire to have surgery.

To sculpt a firm jawline Anna Gunning Owner at The Laser and Skin Clinic often relies on Ultherapy, which delivers ultrasound energy deep into the skin, causing new collagen production for significant skin tightening in about 3-6 months. If your skin is sagging, this "resets the clock without surgery," says Anna.

How does Ultherapy work
Ultherapy is a non-surgical ultrasound treatment that stimulates the production of new collagen and elastin deep within the skin of the face, neck, and décolleté which reduces as you get older. The unique benefit of Ultherapy treatment is that it uses precise ultra sound energy to target and tighten the deeper muscle layers creating that non-surgical lifting result. Up until this technology it was impossible to reach these support structures at muscle level without plastic surgery.

Concerns Treated

- Skin laxity & sagging
- Lowered brows
- Sagging under the chin
- Loose skin on the neck
- Lines & wrinkles on décolletage

Time to full effect

Three to six months. The results are not immediate but most clients will see visible results in the first few weeks. Final results can be seen at six months after treatment.

Recovery time

Unlike many other aesthetic treatments the benefits of Ultherapy is that there is little to no recovery time.

Who is suitable

The best candidates for this treatment are people with early signs of ageing that are starting to notice skin laxity.

Will I need repeat treatments

While most celebs have it yearly, Anna says, the majority of us will get away with waiting 18 months to two years between treatments.
